IoMT Security Conundrum: Clinical Efficiency when Implementing Security Measures

Sponsored by:

FALL
SUMMIT
2019

Defining IoMT:

What devices fall under the Internet of Medical Things umbrella?

Evolving security concerns:

How does strategy change across different types of devices?

Network-connected devices:

Does communication between devices and applications dictate security measures?

Device ownership:

How does security differ based on device ownership?

Balancing security and convenience:

How do clinical workflows impact
security measures?

Best practices:

How can teams best manage the intricacies around device security which we've just discussed?

Evolving security needs:

What do the next few years hold for
Healthcare IT professionals?

Sharing knowledge:

What question would you like to pose to another panelist?

Audience challenge:

What actionable items should listeners most take from this session?

Lessons learned:

Panelists share final thoughts for our audience.

IoMT Security Conundrum: Clinical Efficiency when Implementing Security Measures
